Bringing energy under control with Mitsubishi Electric at Facilities Show 2014

Mitsubishi Electric has a double demonstration of its expertise in energy saving on stand Number Q1155 at the Facilities Show (17-19 June, Excel, London). It will be highlighting its innovative, energy efficient Jet Towel hand dryer and showcasing its world class inverters which can drastically reduce the energy consumption of electric motors.

Mitsubishi Electric Jet Towel was the original high speed hand dryer. Launched over twenty years ago, its current Mark 8 Version uses a fraction of the energy of conventional hot air dryers. It also sets the industry standard for bacterial control, with moisture from hands directed straight into a drain and anti-microbial surfaces. Drying time is about one-third that of other dryers, while the Jet Towel also demonstrates the long term reliability synonymous with the Mitsubishi name.

Mitsubishi is a world leader in inverters, a technology that allows the electric motors driving pumps, fans, air handling equipment and other build services equipment to run at variable speeds. This means motor speed can be matched exactly to application requirements, and even a slight reduction in speed results in significant energy savings.
